

Innovative Data Extraction Technology

Ryan eExtract® for Oracle is an innovative technology platform providing custom queries that report master data, transactional information, and other relevant data from the standard table structures in Oracle's e-Business Release 11i. This versatile application can be launched from any operating system that supports Java. Ryan eExtract® retrieves general ledger journal information and specific detailed transactional information from sub-ledgers such as payables, purchasing, inventory, and other relevant Oracle applications. The tool can be tailored to extract customer-specific configurations such as key flexfields and optional data stored in descriptive flexfields. The data is extracted to delimited flat files that can be loaded into end-user tools and used to support tax reviews and audits. All data is retrieved by accounting period and is reconcilable to the standard trial balance.

Ryan eExtract® includes all information on a single line item by drilling down to the Oracle e-Business Suite sub-ledgers.

The Ryan eExtract® application has four main functions:

- Mass data extraction*
- General ledger balance extraction*
- Master Oracle data extraction support*
- Ad-Hoc querying and reporting*

"Ryan is a key Vertex implementation partner. Their experienced professionals are respected in the market for their depth of technical understanding, their practical application of this knowledge, and how they work with their clients."

Jack Ferraioli
Vice President, Customer Relationship Development

Benefits of Ryan eExtract®

Simplified Data Extraction

Gain full access to financial transactions containing relevant information for a traditional or reverse audit. Purchase order, invoice, tax, and payment information are included to minimize additional data requests from auditors.

Oracle Integration

Ryan eExtract® for Oracle works with Oracle e-Business Suite 11i. Modifications to the standard code can be made, enabling the program to work with other Oracle applications and/or archived data.

Stand-Alone Application

Ryan eExtract® for Oracle requires no software installation. It can be executed outside of the Oracle e-Business Suite 11i application by entering the appropriate credentials for connecting to the database directly.
